Acer Aspire One ZG5 AOA150 connects to router but not internet

Written By: tiki

Step 1 — Acer Aspire One ZG5 AOA150 connects to router but not internet

- Problem: Acer Aspire One model ZG5 AOA150, will connect to some routers and access the internet but not all routers. The driver that is in the driver support section for this model, is too old. 7.6.0.224 is the problem. Acer USA has not posted the latest backward compatible Atheros driver 7.7.0.456 on this model's support page.
- Solution: Go to USA site: <http://support.acer.com/us/en/default.as...> Choose Netbook> Select your product> Netbook/Chromebook> AspireOne > AOD255 (yes, choose the wrong model) > Confirm. Scroll down to bottom of page to Wireless LAN section and download: Wireless LAN Driver Atheros 7.7.0.456

Step 2

- Save As.. to your directory of choice: 7.7.0.456_XPx86_A.zip After downloading close all programs, right-click and extract to default directory. Make note of where it is. Shut off wireless. Click on Setup icon in the directory. Pop up will ask if you want to Update or Uninstall device. Uninstall the device and reboot.

Step 3

- Windows may discover new hardware upon reboot. Cancel. Turn on wireless. Go back to directory and click on Setup icon in the directory again. Install the device. You should have wireless back and internet working.

To reassemble your device, follow these instructions in reverse order.
